PROFESSIONAL SUMMARY

Software engineer and RIT CS graduate who builds tools, interactive systems, and data-connected applications. Recent work includes live-event technical infrastructure at Jack Morton, a HoloLens 2 factory-data prototype, and a Roblox game with 57,000+ visits.

EDUCATION

Rochester Institute of Technology *Aug 2022 – Aug 2025*
Bachelor of Science in Computer Science · GPA 3.65 · Rochester, NY

Monroe Community College *Aug 2020 – May 2022*
Associate of Science in Computer Science · GPA 3.67 · Rochester, NY

TECHNICAL SKILLS

LANGUAGES	Luau, Python, C#, Java, SQL, C, C++, TypeScript, JavaScript, PHP, HTML
FRAMEWORKS	.NET, Angular, Mixed Reality Toolkit, OpenCV, SQLite
TOOLS	Git, GitHub, Visual Studio, VS Code, Unity, Roblox Studio, Android Studio, Trello
CONCEPTS	Object-oriented design, multithreading, databases, mixed reality, automation, embedded systems

EXPERIENCE

Jack Morton Worldwide — Senior Support Center Representative *Apr 2025 – Sep 2025*
Technical Support · Global Events Infrastructure

- Managed database systems and data flow supporting global technical infrastructure for live events.
- Resolved critical technical escalations for VMware Explore 2025 under live-event time pressure.

Rochester Institute of Technology — Innovation Fellows Co-Op *Jun 2023 – Aug 2023*
Software Developer · Rochester, NY

- Built an MVP in C# with a company partner, moving from customer interviews to a working prototype.
- Served as software developer, presentation lead, and team coordinator for a small cross-functional group.

Javlyn Process Systems — Research Internship *Jul 2022 – Aug 2022*
AR / Software Research · Rochester, NY

- Researched whether dynamic augmented reality was feasible for operators on a live factory floor.
- Prototyped a Microsoft HoloLens 2 app in C# that queried SQL and displayed live component values such as fluid level and flow rate.
- Integrated SQL, PHP, JSON, C#, and Microsoft's Mixed Reality API into a single shop-floor visualization path.

PROJECTS

Crazy Dice Tower Defense `Luau · Personal` *2020 – Present*

- Designed and programmed a Roblox tower defense game as sole programmer, UX designer, and 3D modeler; 57,000+ visits.
- Built wave, economy, and tower systems under performance constraints; coordinated art and audio contributors.

Macro Studio `Python · SQLite · Personal` *Jan 2026 – Feb 2026*

- Built a desktop automation framework with vision, position/color targeting, and multithreaded task persistence.
- Wrote API-style documentation and release notes for an open-source release.

Jott Translator `Java · Academic` *Jan 2024 – Apr 2024*

- Implemented parse-tree construction, token validation, and semantic checks; contributed Jott-to-Python translation.

Miniature Fan Simulation `C · Embedded · Academic` *Nov 2021 – Dec 2021*

- Programmed a Dragon 12 microcontroller fan with variable speed, timed shutoff, temperature trigger, and directional control.
